

2015 Winter Wheat Trial Agri-Tech Consulting

3.4
Bushel/Acre
Increase

Phos-Hold treated phosphorus obtained the highest yield potential in both P rates applied per acre. The 75% rate w/Prevent demonstrated no loss in yield potential when compared to the 100% untreated rate of P.

In both soil and plant tissue testing, the P applications made with Phos-Hold maintained the highest level of available phosphorus during the growing season.
